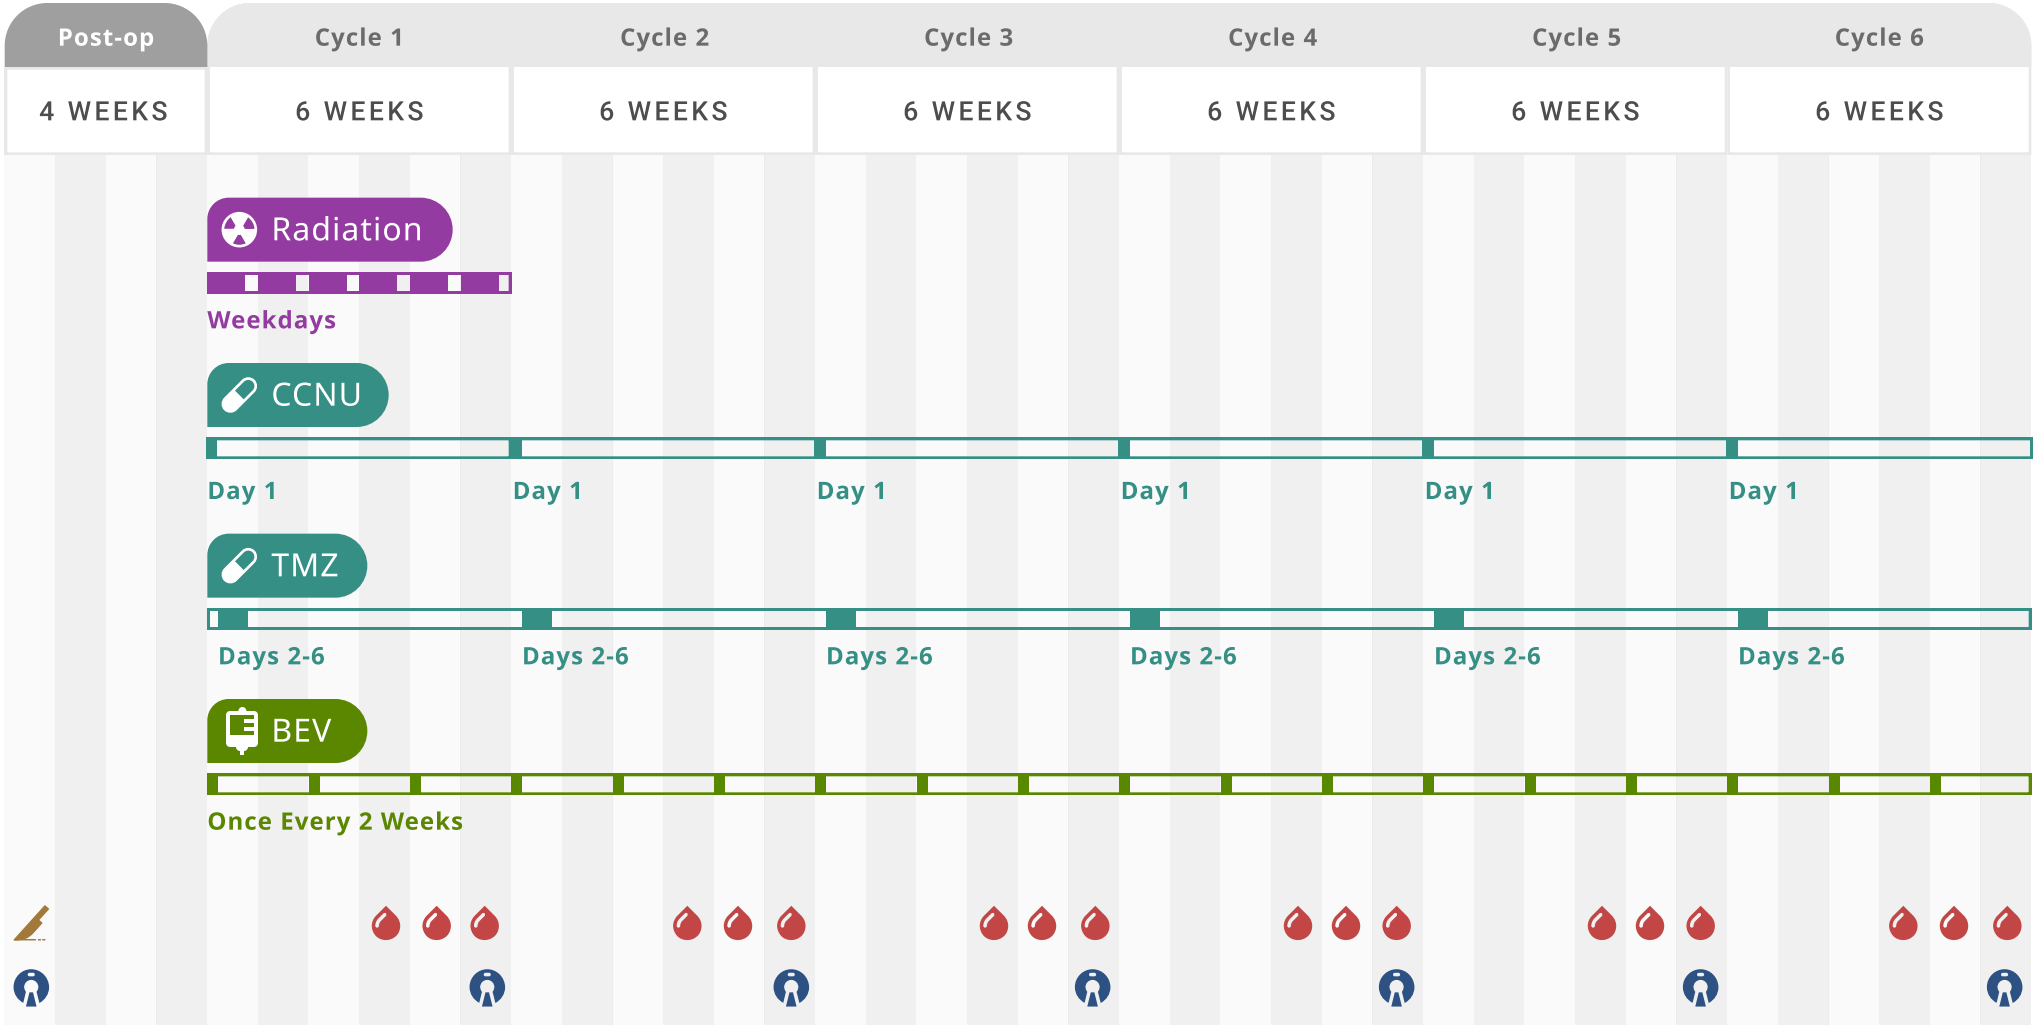
Treatment Plan Overview

HERRLINGER PROTOCOL + BEV

4-6 weeks after surgery, you'll start 6 weeks of radiation and 6 week cycles of chemo with Lomustine (CCNU) on day one and Temozolomide (TMZ) days 2-6. You'll have occasional bloodwork and MRIs. You'll have infusions (BEV) every two weeks.



CCNU Called: Lomustine or Gleostine

TMZ Called: Temozolomide or Temodar

BEV Called: Bevacizumab, Avastin or MVasi

Surgery · Bloodwork · MRI
