

Treatment Plan Overview

STUPP PROTOCOL + BEV

4-6 weeks after surgery, you'll have 6 weeks of chemo (TMZ) and radiation with weekly blood draws. After a recovery month, you'll take TMZ on days 1-5 but no TMZ on days 6-28 (which counts as one 28-day cycle). You'll have occasional bloodwork and MRIs. You'll have infusions (BEV) every two weeks.

TMZ Temozolomide or Temodar
BEV Bevacizumab, Avastin or MVasi

Surgery Bloodwork MRI
